“FIELD FACTS SUMMARY”

Over the past twenty years, EON has developed complex, liquid organic nutrition as essential supplements in the fields of Agriculture, Viticulture and large-scale Horticulture.

ENERGY Solutions™ is formulated to develop Soil Productivity, with Crop strength and Premium yields, in a healthy, sustainable manner.

Organic Energy™ is formulated to provide essential Vitamins & Minerals as a feed supplement for Livestock and can work in tandem with ENERGY Solutions™ when applied to grazing pastures.

☐ SOIL PRODUCTIVITY:

“The productivity of a soil is in direct proportion to it’s microbe activity and their population is governed by the rate at which, energy material in Organic form, is added to the soil.”

Prof. S. Wedburg UNI. Connecticut USA

☐ SOIL BIOTA: is continuously working to provide life and health to the soil and can be encouraged by:- A/. Crop Rotation B/. Minimum Till C/. The addition of Organic Supplements.

Agri. Soil Pathology. Dept. Prim. Industries

☐ CROP STRENGTH:

Chemical/Synthetic fertilisers cannot provide the full complement of nutrients required for optimum health and strength. Organic inputs supplement the chemicals by supplying multiple beneficial nutrients including all-important Proteins.

Protos – First

☐ ORGANIC CHELATION:

This is the process where chelating agents (ligands) bind to chemical/synthetic fertiliser elements to ensure a more complete uptake into plants, reduce leaching, thereby improve their efficiency and care of the environment.

Findings of G.T. Morgan & H.K. Drew

☐ LIVESTOCK HEALTH:

Organic Energy™ Contains all 4 nutrient groups essential for livestock health:- A/. Amino Acids B/. Fatty Acids C/. Vitamins D/. Minerals. These nutrients when applied to pastures and feed, are digested by livestock, promoting their health and well-being.

Neil A. Campbell’s Biology

Our special formulae of Organic nutrients have proven successful in a diverse range of Crops, Soils and Climates, from Australia to India, the Middle East and China.
